

BAB V

CONCLUSION AND SUGGESTION

In this chapter, the researcher provided the conclusion based on the result of this research. The researcher also gave suggestion for the readers of this research. The researcher hoped this research would be useful for the readers.

A. Conclusion

In this research, the researcher had found some problems in students' writing ability especially in writing descriptive text. The researcher would like to overcome these problems and improve students' ability in writing descriptive text by using a technique called clustering technique. The clustering technique is a technique that commonly used in teaching writing descriptive text. Clustering technique is a technique that used for grouping the ideas in the form of circle and connected the ideas by using row. A technique was really important to gained students' enthusiasm in learning in order they could improve their ability in writing descriptive text.

The researcher conducted this research in two cycles. The first cycle was conducted in two meetings. The result of first cycle shown that students participations still low and did not face the criteria of success of this research, as same as with the students' participation the students' score was still low and need improvement therefore the research continued to second cycle. On the second cycle the researcher had improved the procedures of teaching in order to gain students participation in the classroom. In the first cycle a few students got better score but some students still got low. However, in the

second cycle the students were able to use clustering technique well in which their writing skill was better than before.

The result that was mentioned in the finding and discussion were proved that the used of clustering technique were succeed because the average of students' participation and students score has a significant improvement in each meetings, so the final result showed that the students have reached the criteria of success both on students' participation and students' score. It meant that the used of clustering technique were succeed to improve students' ability in writing descriptive text at SMA Immanuel Sintang for class X B students.

B. Suggestion

In this research, the researcher was used clustering technique as a solution to overcome the problems that have been found in the pre-observation. In this research the focus was to help students improve their ability in writing descriptive text by using a technique called clustering technique. Clustering technique is one of the techniques that usually used in teaching writing descriptive text. Clustering technique is a technique to clustering or grouping the idea before write a text it used circles, lines, and boxes for grouping or diagramming the idea and connect the ideas using row. The preparation of this technique was important to know some steps of applying clustering technique, those steps helped to know the right direction before make a cluster of the idea for a paragraph. Based on the finding, clustering technique is a technique that easy to apply and can be understand

by the students. The researcher highly recommend clustering technique for teaching writing descriptive text because it help the students to find the ideas before they write the paragraph. The research also suggest for those who will used clustering technique to pay attention on the step of applying the clustering technique.
